

HOW A TRIBAL POLICE DEPARTMENT UNIFIED VIDEO EVIDENCE MANAGEMENT WITH GETAC VIDEO SOLUTIONS

WHY GETAC?

Excellent Low TCO:

Getac computers deliver excellent total cost of ownership (TCO) with extensive product lifecycles that minimize disruption and enhance productivity.

Comprehensive Customer Support:

Getac customers benefit from robust engineering services and customer support.

Industry-Leading Warranty:

Getac video hardware is available with up to a five-year limited warranty for defects in materials and workmanship.

GETAC USE CASE

A small tribal police department in the Pacific Northwest had big-agency accountability duties on a small-agency budget, with no IT staff to run its technology. A handful of cross-trained officers cover an entire reservation around the clock, answering to a tribal council, a tribal court, and a community where the person in the driver's seat is often someone they grew up with. Their video was assembled from separate body-worn and in-car parts rather than built as one system, which left gaps when footage mattered, scattered clips as disconnected files, and piled records and redaction work onto a single administrative role. For a force that governs by trust, a missed or unusable recording is a gap neighbors fill with their own version, and that erosion costs far more than any equipment bill.

The department replaced the patchwork with Getac Video Solutions on one platform: BC-04 4K body-worn cameras, MVS in-car video, and Getac Redaction, one vendor accountable for the whole chain. Body-worn recording now holds through a full solo shift, in-car and body-worn footage sync into a single record, and redaction is light enough for one staff member to keep tribal court, public-records requests, and task-force handoffs moving. The result is an impartial record on every shift that holds up in tribal court and in county, state, and federal handoffs, built on a system a lean team can own outright and backed by a five-year warranty. The department went from tending a collection of parts to relying on one system, freeing officers to spend their hours in the community instead of on the technology.

Getac

BC-04

4K UHD RUGGED BODY-WORN CAMERA

Built for public safety field operations, the Getac BC-04 delivers clear video capture, real-time connectivity, rugged reliability, and intuitive evidence tagging for officers working in demanding environments.

CLEAR VIDEO CAPTURE

The BC-04 delivers 4K UHD video with HDR encoding for clear, detailed footage in changing light conditions. With 128GB of built-in storage and more than 12 hours of recording time, it is built to capture the full shift. A wide field of view helps capture more of the scene as events unfold.

PURPOSE-BUILT RUGGED

The BC-04 is MIL-STD-810H and IP67 certified, with resistance to vibration, submersion, extreme temperatures, and drops up to 6 feet. It is built for public safety environments where standard devices are not enough.

FIELD-READY CONNECTIVITY

Dual SIM card slots support easy switching between public safety networks, while Wi-Fi, Bluetooth, GPS, and optional 4G LTE help keep officers connected in the field. Live streaming and real-time geolocation give command staff better visibility when it matters most.

INTUITIVE EVIDENCE CAPTURE

The rotating click wheel allows officers to quickly tag footage into predefined video types, while the OLED display shows recording status, upload status, battery life, date, time, user ID, and more, even in dark conditions.
